Documentation and Support

This booklet contains safety information, installation instructions and full specifications for the Audio Precision APx52x and 58x families of audio analyzers.

The APx500 User's Manual

Detailed information on the operation of the APx52x and 58x families of analyzers is available from the embedded Help installed with the APx500 measurement software, and in the APx500 User's Manual, included with the analyzer. The user's manual is also available as a PDF on the APx500 Application Disc and on the Web at ap.com; additional copies can be ordered from Audio Precision or your local distributor.

Audio Test Discs

These discs are available:

- APx-DVD1 is a playable video DVD with menu-driven linear and coded audio test signals for external source use with DVD players.
- APx-CD1 is a playable audio CD with linear audio test signals for external source use with CD players.

ap.com

Visit the Audio Precision Web site at ap.com for APx support information. APx resources are available at ap.com. You can also contact our Technical Support staff at techsupport@ap.com, or by telephoning 503-627-0832 ext. 4, or 800-231-7350 ext. 4 (toll free in the U.S.A.).

Safety

Safety Information

Do NOT service or repair this equipment unless properly qualified. Servicing should be performed only by a qualified technician or an authorized Audio Precision distributor.

Do NOT defeat the safety ground connection. This equipment is designed to operate only with an approved three-conductor power cord and safety grounding. Loss of the protective grounding connection can result in electrical shock hazard from the accessible conductive surfaces of this equipment.

Do NOT exceed mains voltage ratings. This equipment is designed to operate only from a 50–60 Hz ac mains power source at 95–264 Vac.

For continued fire hazard protection, fuses should be replaced ONLY with the exact value and type indicated on the rear panel of the instrument and discussed on page 4 of this manual.

The International Electrotechnical Commission (IEC 1010-1) requires that measuring circuit terminals used for voltage or current measurement be marked to indicate their Measurement Category. The Measurement Category is based on the amplitude of transient or impulse voltage that can be expected from the AC power distribution network. This product is classified as Measurement Category I, abbreviated “CAT I” on the instrument front panel. This product should not be used within Categories II, III, or IV. The 2-channel input module measurement terminals are rated for a maximum voltage of 230 Vpk to ground, and a signal input of 160 Vrms unbalanced, 300 Vrms balanced; the 8-channel input module measurement terminals are rated for a maximum input of 160 Vpk to ground, and a signal input of 115 Vrms, balanced or unbalanced. These ter-

minals are intended to be used for the measurement of audio signals only.

Do NOT substitute parts or make any modifications without the written approval of Audio Precision. Doing so may create safety hazards. Using this product in a manner not specified by Audio Precision can result in a safety hazard.

This product is for indoor use—Installation Category II, Measurement Category I, pollution degree 2.

To clean the enclosure of this product, use a soft cloth or brush to remove accumulated dust. A mild detergent may be used to remove remaining dirt or stains. Do not use strong or abrasive cleaners. Wipe all surfaces with a damp cloth.

This unit is supplied with four feet on the bottom surface and four feet on the right side surface. The unit should only be operated while resting on the bottom surface feet. The feet on the right side are provided for convenience and stability when transporting the unit. DO NOT operate the unit while it is sitting on the side feet.

Safety Symbols

The following symbols may be marked on the panels or covers of equipment or modules, and are used in this manual:

WARNING!—This symbol alerts you to a potentially hazardous condition, such as the presence of dangerous voltage that could pose a risk of electrical shock. Refer to the accompanying Warning Label or Tag, and exercise extreme caution.

ATTENTION!—This symbol alerts you to important operating considerations or a potential operating condition that could damage equipment. If you see this marked on equipment, refer to the Operator's Manual or User's Manual for precautionary instructions.

FUNCTIONAL EARTH TERMINAL—A terminal marked with this symbol is electrically connected to a reference point of a measuring circuit or output and is intended to be earthed for any functional purpose other than safety.

PROTECTIVE EARTH TERMINAL—A terminal marked with this symbol is bonded to conductive parts of the instrument and is intended to be connected to an external protective earthing system.

Disclaimer

Audio Precision cautions against using their products in a manner not specified by the manufacturer. To do otherwise may void any warranties, damage equipment, or pose a safety risk to personnel.

Sécurité

Consignes de sécurité

Ne procédez PAS à l'entretien ou à la réparation de cet équipement à moins d'être dûment qualifié(e) pour le faire. L'entretien devrait être effectué uniquement par un technicien qualifié ou un distributeur Audio Precision agréé.

Ne PAS dérouter le branchement de la mise à la terre de sécurité. Cet équipement est conçu pour être utilisé uniquement avec un cordon d'alimentation approuvé avec connecteur à trois conducteurs et mise à la terre de sécurité. La perte de connexion à la mise à la terre protectrice peut entraîner un risque de choc électrique à partir des surfaces conductrices accessibles de cet équipement.

Ne PAS dépasser la tension de réseau nominale. Cet équipement est conçu pour fonctionner uniquement à partir d'une source d'alimentation réseau de 50–60 Hz CA, à une tension nominale de 100–240 V CA. La tension d'alimentation du réseau ne doit pas dépasser ±10 % de la tension nominale (90–264 V CA).

Pour obtenir en permanence la protection contre les risques d'incendie, les fusibles doivent être remplacés UNIQUEMENT par des fusibles de même valeur et type, comme indiqué sur le panneau arrière de l'instrument et précisé à la page 8 de ce livret.

La International Electrotechnical Commission (la Commission électrotechnique internationale) (CEI 1010-1) exige que les bornes des circuits de mesure utilisées pour la mesure de la tension ou du courant identifient leur catégorie de mesure. La catégorie de mesure se base sur l'amplitude de la tension transitoire ou de la tension d'impulsion à laquelle on peut s'attendre d'un réseau de distribution d'alimentation électrique CA. Ce produit est classé dans la catégorie de mesure I, selon l'abréviation « CAT I » inscrite sur le panneau avant de l'instrument. Ce produit ne

devrait pas être utilisé dans les catégories II, III ou IV. Les bornes de mesure du module d'entrée à deux canaux sont classées selon une tension maximale de crête de 230 V à la terre et une entrée de signal de 160 V RMS non équilibrés, et de 300 V RMS équilibrés; les bornes de mesure du module d'entrée à huit canaux sont classées selon une tension maximale de crête de 160 V à la terre et une entrée de signal de 115 V RMS, équilibrés ou non équilibrés. Ces bornes sont destinées à la mesure des signaux audio seulement.

Ne PAS remplacer de pièces ou effectuer de modifications sans l'approbation écrite d'Audio Precision. Si c'est le cas, il pourrait y avoir des risques pour la sécurité. Utiliser ce produit d'une manière non précisée par Audio Precision peut entraîner un risque pour la sécurité.

Ce produit est destiné à une utilisation à l'intérieur-Catégorie d'installation II, Catégorie de mesure I, degré de pollution 2.

Pour nettoyer le boîtier de ce produit, utiliser un chiffon doux ou une brosse douce permettant d'éliminer la saleté accumulée. Un détergent doux peut être utilisé pour éliminer la saleté ou les taches. Ne pas utiliser de produits nettoyants forts ou abrasifs. Essuyer toutes les surfaces à l'aide d'un chiffon humide.

Cette unité est fournie avec quatre pattes sur le dessous et quatre pattes sur le côté droit. L'unité doit être utilisée uniquement lorsqu'elle repose sur les pattes du dessous. Les pattes sur le côté droit sont installées pour plus de commodité et de stabilité lors du transport. NE PAS utiliser l'unité lorsqu'elle repose sur les pattes du côté

Symboles de sécurité

Les symboles suivants peuvent être présents sur les panneaux ou les couvercles de l'équipement ou des modules, et sont utilisés dans le présent manuel:

AVERTISSEMENT!—Ce symbole vous informe d'une situation potentiellement dangereuse, par exemple, la présence d'une tension dangereuse qui pourrait présenter un risque de choc électrique. Consultez l'autocollant ou l'étiquette d'avertissement qui l'accompagne, et faites preuve d'une grande prudence.

ATTENTION!—Ce symbole vous informe d'importantes considérations liées au fonctionnement ou d'une condition d'utilisation potentielle qui pourrait endommager l'équipement. Si vous voyez ce symbole sur l'équipement, consultez le manuel de l'opérateur ou le manuel de l'utilisateur pour connaître les instructions préventives.

BORNE DE TERRE FONCTIONNELLE— Les bornes identifiées à l'aide de ce symbole sont reliées électrique-

ment à un point de référence d'un circuit ou d'une sortie de mesure et doivent être raccordées à la terre (mise à la terre) pour toute fonction utilitaire autre que la sécurité.

BORNE DE TERRE DE PROTECTION—Les bornes identifiées à l'aide de ce symbole sont liées à des pièces conductrices de l'instrument et elles doivent être raccordées à un système protecteur de mise à la terre externe.

Avis de non-responsabilité

Audio Precision déconseille fortement l'utilisation de ses produits d'une manière non spécifiée par le fabricant. Une telle utilisation pourrait annuler toute garantie, endommager l'équipement ou présenter un risque de sécurité pour le personnel.

Seguridad

Información de seguridad

NO proporcione servicio o reparación a este equipo a menos que esté debidamente calificado. El trabajo de servicio deberá ser efectuado solamente por un técnico calificado o un distribuidor autorizado de Audio Precision.

NO modifique la conexión de seguridad a tierra. Este equipo está diseñado para operar solamente con una extensión aprobada de tres conductores puestos a tierra de seguridad. La pérdida de conexión de protección a tierra puede dar como resultado un peligro de descarga eléctrica al tocar las superficies conductoras accesibles de este equipo.

NO exceder las clasificaciones de la tensión de red eléctrica. Este equipo está diseñado para operar solamente de una fuente de suministro eléctrico de 50–60 Hz de corriente alterna a una tensión nominal de 100–240 VCA. La fuente de suministro de voltaje no debe exceder del ±10 % del nominal (90–264 VCA).

Para protección continua contra riesgo de incendio, los fusibles deberán reemplazarse SOLAMENTE con fusibles de valor y tipo exactos indicados en el panel posterior del instrumento y que se explica en la página 12 de este folleto.

International Electrotechnical Commission [La Comisión Electrotécnica Internacional] (IEC 1010-1) requiere que los terminales del circuito de medición que se utilizan solamente para medición de voltaje o corriente se marquen para indicar la categoría de medición. La categoría de medición se basa en la amplitud del voltaje transitorio o de impulso que se puede esperar de la red de distribución de voltaje de CA. Este producto se clasifica como Medición de Categoría I, abreviado como “CAT I” en el panel frontal del instrumento.

Este producto no deberá usarse dentro de las categorías II, III, o IV. Los terminales de medición del módulo de entrada de 2 canales tienen una capacidad para un voltaje máximo de 230 Vpk a tierra, y una entrada de señal de 160 Vrms no balanceada, 300 Vrms balanceada; los terminales de medición del módulo de entrada de 8 canales tienen una capacidad para un voltaje máximo de 160 Vpk a tierra, y una entrada de señal de 115 Vrms, balanceada o no balanceada. Estos terminales están concebidos para usarse solamente para la medición de señales de audio.

NO reemplace partes ni haga modificaciones sin la aprobación por escrito de Audio Precision. Hacerlo podría causar riesgos de seguridad. El uso de este producto en una manera no especificada por Audio Precision puede resultar en un riesgo de seguridad.

Este producto es para uso en interiores-Categoría de instalación II, Categoría de medición I, grado de contaminación 2.

Para limpiar la caja de este producto, utilice un trapo o cepillo suave para remover el polvo acumulado. Se puede utilizar un detergente neutro para remover la suciedad o manchas remanentes. No utilice limpiadores fuertes o abrasivos. Limpie todas las superficies con un trapo húmedo.

Esta unidad se suministra con cuatro patas en la superficie inferior y cuatro patas en la superficie del costado derecho. La unidad solamente debe operarse al estar apoyada en las patas de la superficie inferior. Las patas en el costado derecho se proporcionan para conveniencia y estabilidad al transportar la unidad. NO opere la unidad al estar apoyada sobre las patas laterales.

Símbolos de seguridad

Los siguientes símbolos podrían estar marcados en los paneles o cubiertas del equipo o los módulos, y se utilizan en este manual:

¡ADVERTENCIA!—Este símbolo le alerta sobre una condición potencialmente peligrosa, tal como la presencia de voltaje peligroso que pudiera representar un riesgo de descarga eléctrica. Consulte la etiqueta de advertencia adjunta y tenga mucha precaución.

¡ATENCIÓN!—Este símbolo le alerta de consideraciones operativas importantes o de una condición operativa potencial que pudiera dañar al equipo. Si usted ve este símbolo en el equipo, consulte el Manual del operador o el Manual del usuario para instrucciones de precaución.

TERMINAL DE TIERRA FUNCIONAL—Un terminal marcado con este símbolo está conectado eléctricamente a un punto de referencia de un circuito de medición o salida y

se supone está conectado a tierra (aterrizado) para algún fin funcional diferente a la seguridad.

TERMINAL DE TIERRA DE PROTECCIÓN—Un terminal marcado con este símbolo está enlazado a partes conductores del instrumento y se supone que está conectado a un sistema externo de protección a tierra (aterrizada).

Exención de responsabilidad

Audio Precision advierte contra el uso de este producto de una manera no especificada por el fabricante. El hecho de no hacerlo de la manera indicada invalidaría las garantías, causaría daño al equipo, o representaría un riesgo de seguridad para el personal.

Installation

Software

All APx systems use the same award-winning measurement software, APx500.

APx “B Series” analyzers

All analyzers shipped in late December 2018 (or afterward) have a new embedded processor and enhanced security provisions. These analyzers are designated “B Series” and carry “B Series” nomenclature. “B Series” APx analyzers do not require an APx KeyBox (see below), but may require authorization codes to enable APx500 software or software options.

The APx KeyBox

If you are using APx500 software version 4.6 or later with an earlier APx analyzer (non “B Series”), you must attach an authenticated APx KeyBox to the Software Options connector on the analyzer rear panel.

The APx KeyBox must be programmed with your analyzer’s serial number at the Audio Precision factory, and cannot be used with any other APx analyzer. You may require authorization codes to enable APx500 software or software options.

Note that without a properly authenticated APx KeyBox attached, APx500 version 4.6 or later will only run in demo mode. If you need a KeyBox, locate your analyzer serial number and go to https://ap.com/get-keybox/ to complete the order form. The APx KeyBox is provided at no cost, free of charge.

Analyzer serial numbers are located on the configuration label on the analyzer rear panel, and on the calibration label on the forward edge of the top panel.

PC system requirements

The APx500 measurement software version 4.1 and later can be very demanding of the personal computer (PC) running the APx software.

Moderate measurement demands

Moderate measurement demands (measurement bandwidths under 90 kHz, channel counts of 2 or 1) will perform adequately using a PC with these minimum specifications:

- Operating system: Microsoft Windows 10 (64-bit), Windows 8 (64-bit), or Windows 7 (64-bit).
- A multi-core processor (at least dual-core) running at a clock speed of at least 2 GHz. Most current processors from Intel and AMD meet these requirements.

Note: the Intel Atom processor does not meet our minimum specification.

- At least 2 GB of RAM.
- At least 300 MB of free hard disk space.
- A CD-ROM optical disc drive.
- A USB 2.0 port; two are required for optional switcher or DCX-127 use.
- A color monitor and a video card with at least VGA capabilities. Video resolution of 1024 x 768 or greater is recommended.

High measurement demands

High measurement demands (measurement bandwidths above 90 kHz, channel counts over 2) will perform much better with a superior PC; in some cases, very high measurement demands can slow or stop measurements.

Please view the current APx PC Minimum System Solutions document on our Web site at www.ap.com. This information will help you to determine the adequacy of a particular PC for high-bandwidth, high-channel count measurement.

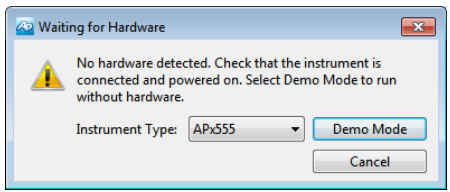
Installation

To install the measurement software, insert the APx500 CD-ROM into the optical drive on the PC and follow the instructions in the installation dialog.

NOTE: You must have local administrator rights to install APx500 software. Go to User Accounts in the Windows Control Panel, or check with your network administrator.

Running the software without instrument hardware attached

You can launch the APx500 software without instrument hardware attached. When no hardware is detected, APx500 will present you with the following dialog box:



Select “Demo Mode.” APx500 will run in demo mode, which allows you to explore the user interface but does not enable any measurement functions. Input data shown in Demo Mode is false data, generated for display only.

From the Instrument Type menu, select an instrument to be emulated in Demo Mode.

Running the software with instrument hardware attached

NOTE: You must have standard user rights or administrator rights to operate APx500 software. Guest users are not supported.

Connecting the instrument to your PC

Before connecting your APx instrument to your PC, install the APx500 measurement software as described above. Connecting the instrument prior to software installation may cause Windows to select an incorrect USB driver for the instrument.

USB driver selection

The measurement software communicates with the instrument using a USB 2.0 interconnection. Once the software is successfully installed, connect one end of the USB cable to a USB 2.0 port on the PC, and the other end to the PC INTERFACE port on the rear of the instrument. We strongly recommend that you use the USB cable included with your instrument (AP order number CAB-APSI). We have tested other USB cables that perform poorly.

Note: Some PCs have optional USB ports on the front of the PC, or on extension brackets on the rear. In many cases these convenience ports have compromised performance due to the extra cable length within the PC. We recommend using USB ports directly connected to the PC motherboard, typically at the rear of the PC.

Connect the instrument mains power cord to the instrument and to a source of ac mains power. See **Connecting your instrument to the electrical mains supply** below for more information about mains connections.

Turn the instrument ON by pressing the pushbutton on the front of the instrument. Microsoft Windows will detect the presence of the instrument on the USB and will open the Hardware Update Wizard to search for the correct software driver. Select “Install the software automatically.” Windows will find the Audio Precision driver software installed with APx500 and connect to the instrument.

Launch APx500 by double-clicking on the installed shortcut. With the instrument connected, you may be asked to update the instrument firmware during the first launch of the measurement software. APx500 will start, and in a short time you will be presented with the opening screen. Refer to the APx500 User’s Manual for more information about making measurements.

A copy of the APx500 User’s Manual is included with your instrument. The manual is also available as a PDF on the APx500 Application Disc and online at ap.com.

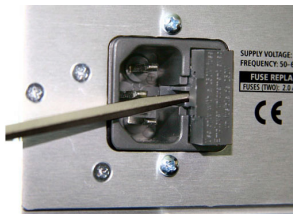
Connecting your instrument to the electrical mains supply

APx52x/58x instruments must be connected to a 50–60 Hz alternating current (ac) electrical mains supply. The minimum voltage is 95 Vac; maximum voltage is 264 Vac. These instruments are fitted with a universal power supply that does not require voltage configuration or change of fuse type to accept mains voltages within the specified range. For all rated voltages, use two mains fuses of type 2A T/SB (5 x20 mm) 250 V.

Removing and installing mains fuses

To remove the mains fuse carrier module, refer to the figures below and proceed as follows:

Power entry module



Fuse carrier removal

Remove the mains power supply cord from the connector on the power entry module, located on the instrument rear panel. The mains fuse carrier module is part of the power entry module, to the right of the power cord connector.

Insert a small screwdriver into the power cord connector area, reaching into the slot on the mains fuse carrier module. Pry the module out slightly, until you can grasp the module firmly with your fingers. Pull the fuse carrier module out of the power entry module. The two mains fuses are loosely mounted within the fuse carrier module; take care not to let them fall.

Replace the fuses if necessary, using fuses as described below. Carefully reinsert the fuse carrier module into the power entry module, and press it firmly into place.

Connect the power cord from a mains power outlet to the power cord connector on the instrument rear panel.

Installation (Fr)

Logiciel

Tous les systèmes APx utilisent le même logiciel de mesure lauréat, soit APx500.

Analyseurs APx « B Series »

Tous les analyseurs livrés à compter de la fin de décembre 2018 seront dotés d'un processeur intégré et de dispositions de sécurité améliorées. Ces analyseurs portent la désignation « B Series » et suivent la nomenclature « B Series ». Les analyseurs APx « B Series » n'exigent pas de dispositif APx KeyBox (voir ci-dessous), mais peuvent nécessiter des codes d'autorisation afin d'activer le logiciel ou les options de logiciel APx500.

Dispositif APx KeyBox

Si vous utilisez la version 4.6 ou une version plus récente du logiciel APx500 avec un analyseur APx antérieur (pas « B Series »), vous devez installer un dispositif APx KeyBox authentifié au connecteur Software Options sur le panneau arrière de l'analyseur.

Le dispositif APx KeyBox doit être programmé avec le numéro de série de votre analyseur à l'usine d'Audio Precision et ne peut être utilisé avec aucun autre analyseur APx. Des codes d'autorisation afin d'activer le logiciel ou les options de logiciel APx500 peuvent être requis.

Veuillez noter que sans l'installation d'un dispositif APx KeyBox correctement authentifié, le logiciel APx500 version 4.6 ou plus récente ne fonctionnera qu'en mode de démonstration. Si vous avez besoin d'un dispositif KeyBox, trouvez le numéro de série de votre analyseur et allez à https://ap.com/get-keybox/ afin de remplir le formulaire de commande. Le dispositif APx KeyBox est fourni sans frais.

Le numéro de série de l'analyseur se trouve sur l'étiquette de configuration à l'arrière de l'analyseur et sur l'étiquette d'étalonnage sur le bord avant du panneau supérieur.

Exigences de système pour l'ordinateur personnel (PC)

Le logiciel de mesure APx500 peut être très exigeant pour l'ordinateur personnel (PC) qui l'exécute.

Demandes de mesure modérées

Les demandes de mesures modérées (bandes passantes de mesure de moins de 90 kHz, nombre de canaux de 2 ou 1) fonctionneront adéquatement avec un PC détenant ces caractéristiques minimales :

- Système d'exploitation : Microsoft Windows 10 (64 bit), Windows 8 (64 bit) ou Windows 7 (64 bit).
- Un processeur multicœur (au moins double cœur) tournant à une vitesse d'horloge d'au moins 2 GHz. La plupart des processeurs actuels Intel et AMD respectent ces exigences.

Remarque : le processeur Intel Atom ne respecte pas nos spécifications minimales.

- Au moins 2 Go de mémoire vive.
- Au moins 300 Mo d'espace libre sur le disque dur.
- Un lecteur optique de CD-ROM.
- Un port USB 2.0; deux ports requis dans le cas de l'utilisation du DCX-127 ou du commutateur optionnel.
- Un moniteur couleur et une carte vidéo avec qualité VGA ou supérieure. Une résolution vidéo de 1024 x 768 ou supérieure est recommandée.

Demandes de mesures élevées

Les demandes de mesures élevées (bandes passantes de mesure de plus de 90 kHz, nombre de canaux de plus de 2) fonctionneront beaucoup mieux avec un PC de puissance supérieure; dans certains cas, les demandes de mesures très élevées peuvent ralentir ou même interrompre les mesures.

Pour en savoir plus à ce sujet, consultez le document courant APx PC Minimum System Solutions (solutions de système minimales pour ordinateur personnel pour APx) sur notre site web, à l'adresse www.ap.com. Ces informations vous aideront à déterminer si un ordinateur personnel, en particulier, convient à l'utilisation d'un appareil APx.

Installation

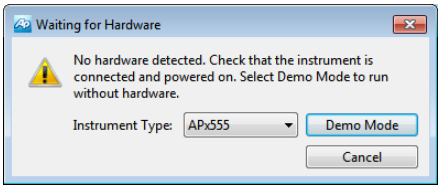
Pour installer le logiciel de mesure, insérez le CD-ROM APx500 dans le lecteur optique de l'ordinateur et suivez les instructions dans la fenêtre de dialogue du logiciel d'installation. Si vous n'avez pas de disque d'application APx500, vous pouvez le télécharger à partir du site web d'Audio Precision, à l'adresse ap.com.

REMARQUE : Vous devez détenir les droits d'administrateur local pour installer le logiciel APx500. Dans le panneau de configuration (Control Panel) de Windows, consultez les comptes d'utilisateur (User Accounts) ou consultez votre administrateur de réseau.

Exécuter le logiciel sans brancher l'instrument

REMARQUE : Vous devez détenir des droits d'utilisateur standard ou des droits d'administrateur pour utiliser le logiciel APx500. Les utilisateurs invités ne sont pas pris en charge.

Vous pouvez exécuter le logiciel APx500 sans brancher l'instrument. Lorsqu'aucun appareil n'est détecté, APx500 vous présente la fenêtre de dialogue suivante :



Sélectionner le « Demo Mode » (mode démo). APx500 sera exécuté en mode démo, ce qui vous permet d'explorer la surface d'utilisateur, mais pas de prendre des mesures. Les données d'entrée présentées en mode démo sont de fausses données, destinées uniquement à des fins de présentation.

À partir du menu Instrument Type (type d'instrument), sélectionnez un instrument à simuler en mode démo.

Exécuter le logiciel avec l'instrument branché

REMARQUE : Vous devez détenir des droits d'utilisateur standard ou des droits d'administrateur pour utiliser le logiciel APx500. Les utilisateurs invités ne sont pas pris en charge.

Brancher l'instrument à votre ordinateur personnel

Avant de brancher votre instrument APx à votre ordinateur, installez le logiciel de mesure APx500 comme décrit plus haut. Brancher l'instrument avant d'installer le logiciel peut entraîner la sélection du mauvais pilote USB pour l'instrument.

Sélection de pilote USB

Le logiciel de mesure communique avec l'instrument à l'aide d'une interconnexion USB 2.0. Une fois l'installation du logiciel réussie, branchez une extrémité du câble USB à un port USB 2.0 de l'ordinateur, et l'autre extrémité au port PC INTERFACE situé à l'arrière de l'instrument. Nous vous recommandons fortement d'utiliser le câble USB fourni avec votre instrument (numéro de commande AP CAB-APSI). Nous avons testé d'autres câbles USB dont le fonctionnement est médiocre.

> *Remarque : Certains ordinateurs sont équipés de ports USB optionnels à l'avant, ou sur des supports de prolongation à l'arrière. Dans bien des cas, ces ports pratiques compromettent la performance étant donné la longueur de câble supplémentaire installée dans l'ordinateur. Nous vous recommandons d'utiliser les ports USB directement branchés à la carte mère de l'ordinateur, soit habituellement ceux qui sont placés à l'arrière de l'ordinateur.*

Branchez le cordon d'alimentation électrique de l'instrument à celui-ci et à une source d'alimentation électrique c.a. Voir « Setting up the hardware » (configurer l'appareil) ci-dessous pour obtenir de plus amples renseignements sur les raccordements au secteur.

Mettez l'instrument sous tension en appuyant sur le bouton d'alimentation à l'avant de l'instrument.

Microsoft Windows détectera la présence de l'instrument branché au port USB et lancera le logiciel Hardware Update Wizard qui recherchera le bon pilote logiciel à installer. Sélectionner « Install the software automatically » (installation automatique du logiciel). Windows trouvera le logiciel pilote Audio Precision installé avec APx500 et branché à l'instrument.

Lancez APx500 en cliquant deux fois sur le raccourci. Une fois l'instrument branché, on pourrait vous demander de mettre à jour le micrologiciel de l'instrument lors de la première exécution du logiciel de mesure. APx500 démar-

rera et, peu de temps après, affichera l'écran d'accueil. Consultez le manuel de l'utilisateur du logiciel APx500 pour de plus amples renseignements à propos des prises de mesures.

Un exemplaire du manuel de l'utilisateur du logiciel APx500 est inclus avec votre instrument. Le manuel de l'utilisateur est aussi disponible en format PDF, sur le disque de l'application APx500 et en ligne à l'adresse ap.com.

Configurer l'appareil

Branchement de votre instrument à l'alimentation secteur

L'instrument APx doit être branché à une alimentation de courant alternatif (c.a.) de 50–60 Hz. La tension minimale est de 90 V c.a.; la tension maximale est de 264 V c.a.

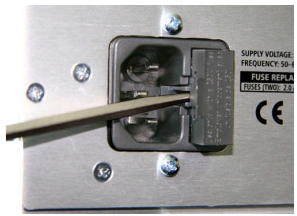
L'instrument est équipé d'une alimentation universelle qui n'exige pas de configuration de tension ni de changement de type de fusible pour accepter les tensions de secteur à l'intérieur de la plage spécifiée.

Retirer et installer des fusibles secteur

Pour toutes les tensions nominales, utilisez deux fusibles secteurs de type 2A T/SB (5 x 20 mm) 250 V.

Pour retirer le module porte-fusibles secteurs, consultez les figures ci-dessous et procédez comme suit :

Module d'entrée d'alimentation



Retrait du porte-fusibles

Retirez le cordon d'alimentation secteur du connecteur au niveau du module d'entrée d'alimentation qui est situé sur le panneau arrière de l'instrument. Le module porte-fusibles secteurs fait partie du module d'entrée d'alimentation, situé à la droite du connecteur de cordon d'alimentation.

Insérez un petit tournevis dans la zone du connecteur de cordon d'alimentation, dans la fente située sur le module porte-fusibles secteurs. Écartez légèrement le module jusqu'à ce que vous puissiez le saisir fermement entre vos doigts. Tirez le module porte-fusibles du module d'entrée d'alimentation. Les deux fusibles secteurs sont montés de manière libre dans le module porte-fusibles; prenez soin de ne pas les laisser tomber.

Remplacez les fusibles, au besoin, à l'aide de fusibles identiques à ceux décrits plus bas. Réinsérez délicatement le module porte-fusibles dans le module d'entrée d'alimentation, et insérez-le fermement en position.

Branchez le cordon d'alimentation d'une prise secteur au connecteur de cordon d'alimentation, sur le panneau arrière de l'instrument.

Instalación

Software

Todos los sistemas APx utilizan el mismo software laureado, APx500.

Analizadores APx “B Series”

Todos los analizadores enviados a fines de diciembre de 2018 (o posteriormente) tienen un nuevo procesador integrado y provisiones de seguridad mejoradas. Estos analizadores se designaron como “B Series” y llevan la nomenclatura “B Series”. Los analizadores APx “B Series” no requieren el APx KeyBox (ver más abajo), pero pueden requerir códigos de autorización para habilitar el software APx500 o las opciones de software.

El APx KeyBox

Si está usando el software APx500 versión 4.6 o posterior con un analizador APx anterior (que no sea “B Series”), debe acoplar un APx KeyBox autenticado al conector “Software Options” en el panel trasero del analizador.

El APx KeyBox debe ser programado con el número de serie de su analizador en la fábrica de Audio Precision, y no puede ser usado con ningún otro Analizador APx. Puede requerir códigos de autorización para habilitar el software APx500 o las opciones de software.

Tenga en cuenta que sin la APx KeyBox debidamente autenticada acoplada, el APx500 versión 4.6 o posterior solo correrá en modo de demostración. Si necesita una KeyBox, localice el número de serie del analizador y vaya a https://ap.com/get-keybox/ para completar el formulario de orden. La APx KeyBox se proporciona sin cargo, de forma gratuita.

Los números de serie del analizador se localizan en la etiqueta de configuración en el panel trasero del analizador, y

en la etiqueta de calibración en el borde delantero del panel superior.

Requisitos de sistema de la PC

El software APx500 para medición puede ser muy exigente de las capacidades de la computadora personal (PC) que opera el software APx.

Demandas de medición moderadas

Las demandas de medición moderadas (anchos de banda de medición de menos de 90 kHz, conteos de canales de 2 o de 1) se ejecutarán adecuadamente usando una PC con las siguientes especificaciones mínimas:

- Sistema operativo: Microsoft Windows 10 (64 bit), Windows 8 (64 bit), o Windows 7 (64 bit).
- Un procesador de núcleo múltiple (por lo menos núcleo doble) operando a una velocidad de reloj de por lo menos 2 GHz. La mayoría de los procesadores actuales de Intel y AMD cumplen con estos requisitos.

Nota: el procesador Intel Atom no cumple con esta especificación mínima.

- Por lo menos 2 GB de RAM.
- Por lo menos 300 MB de espacio libre en disco duro.
- Una unidad lectora óptica de CD ROM.
- Un puerto USB 2.0; se requieren dos para usar un interruptor opcional o un DCX-127.
- Un monitor a color y una tarjeta de vídeo con al menos capacidades VGA. Se recomienda una resolución de vídeo de 1024 x 768 o superior.

Demandas de medición alta

Las demandas de medición alta (anchos de banda de medición de más de 90 kHz, conteos de canal de más de 2) tendrán mejor rendimiento con una mejor PC; en algunos casos, las demandas de medición muy altas pueden ralentizar o detener las mediciones.

Para obtener más información, consulte el documento actualizado Soluciones Mínimas del Sistema APx para PC [APx PC Minimum System Solutions] visite nuestro sitio web en www.ap.com. Esta información le ayudará a determinar si una PC específica es adecuada para usarse con APx.

Instalación

Para instalar el software de medición, inserte el CD-ROM del APx500 dentro de la unidad óptica de la PC y siga las instrucciones en el diálogo de instalación. Si usted no tiene el disco de la aplicación disco de aplicación del APx500 [APx500 application disc], puede descargar APx500 del sitio web de Audio Precision en www.ap.com.

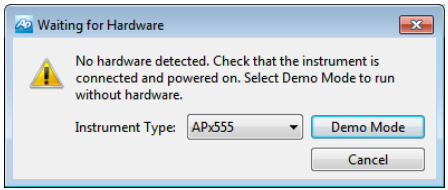
NOTA: Usted debe tener derechos de administrador local para instalar el software APx500. Ingrese a Cuentas de usuarios en el Panel de Control de Windows, o revise con su administrador de red.

Operación del software sin el hardware del instrumento conectado

NOTA: Usted debe tener derechos estándar de usuario o de administrador para operar el software APx500. No se permiten usuarios invitados.

Usted puede iniciar el software APx500 sin tener conectado el hardware del instrumento. Cuando no se detecta el

hardware, el APx500 le mostrará el siguiente cuadro de diálogo:



Seleccione “Demo Mode” [Modo de demostración]. El APx500 funcionará en modo de demostración, lo que le permite explorar la interfaz de usuario pero no habilita ninguna función de medición. Los datos de entrada que se muestran en el Demo Mode [Modo de demostración] son falsos, se generan solamente para fines de visualización.

Desde el menú de Instrument Type [Tipo de instrumento], seleccione un instrumento a ser emulado en el Demo Mode [Modo de demostración].

Operación del software con el hardware del instrumento conectado

NOTA: Usted debe tener derechos estándar de usuario o de administrador para operar el software APx500. No se permiten usuarios invitados.

Conexión del instrumento a su PC

Antes de conectar su instrumento APx a su PC, instale el software de medición APx500 tal como se describió anteriormente. El conectar el instrumento antes de instalar el software puede resultar en que Windows seleccione un controlador de USB incorrecto para el instrumento.

Selección del controlador del USB

El software de medición se comunica con el instrumento utilizando una interconexión USB 2.0. Una vez que el software se haya instalado correctamente, conecte un extremo del cable USB a un puerto USB 2.0 en la PC, y el otro extremo al puerto de PC INTERFACE [INTERFAZ de la PC] en la parte posterior del instrumento. Recomendamos enfáticamente que use el cable USB incluido con su instrumento (AP número de orden CAB-APSI). Hemos probado otros cables USB con mal funcionamiento.

Nota: Algunas PC tienen puertos USB opcionales al frente de la PC, o en soportes de extensión en la parte posterior. En varios casos, estos puertos de conveniencia han afectado el rendimiento debido a la longitud adicional del cable dentro de la PC. Recomendamos usar estos puertos USB directamente conectados a la tarjeta madre de la PC, típicamente en la parte posterior de la PC.

Conecte al instrumento el cable de suministro de voltaje y a una red eléctrica de CA. Consulte “Setting up hardware” [Configuración del hardware] para obtener más información acerca de las conexiones a la red eléctrica.

Encienda el instrumento presionando el botón de pulsar al frente del instrumento.

Microsoft Windows detectará la presencia del instrumento en el puerto USB y abrirá el Hardware Update Wizard [Asistente de actualización de hardware] para buscar el controlador de software correcto. Seleccione “Install the software automatically” [Instalar el software automáticamente]. Windows encontrará el software del controlador de Audio Precision instalado con APx500 y se conectará al instrumento.

Ejecute APx500 haciendo doble clic en el acceso directo instalado. Con el instrumento ya conectado, se le podría pedir actualizar el firmware del instrumento durante la primera ejecución del software de medición. APx500 iniciará, y en un tiempo breve se mostrará la pantalla de inicio. Consulte el Manual del usuario del APx500 para obtener más información acerca de hacer las mediciones.

Su instrumento incluye una copia del Manual del usuario del APx500. El manual también está disponible como PDF en el Disco de Aplicación del APx500 y en línea en ap.com.

Configuración del hardware

Conexión de su instrumento a la red de energía eléctrica

El instrumento APx debe conectarse a una red de corriente alterna (AC) a 50–60 Hz. El voltaje mínimo es de 90 VCA, el voltaje máximo es de 264 VCA.

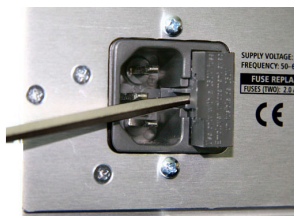
El instrumento está equipado con una fuente de alimentación universal que no requiere configurar el voltaje ni cambiar el tipo de fusible para aceptar voltajes de alimentación dentro del rango especificado.

Extracción e instalación de fusibles de fuente de alimentación

Para todos los voltajes nominales, use dos fusibles de fuente de alimentación tipo 2A T/SB (5x20 mm) 250 V.

Para extraer los fusibles del módulo portador de fusibles de fuente de alimentación, consulte las figuras a continuación y proceda de la siguiente manera:

Módulo de entrada de energía



Extracción de portador de fusibles

Extraiga el cable de la fuente de alimentación del conector en el módulo de entrada de energía, que se localiza en el panel posterior del instrumento. El módulo del portador de fusible de fuente de alimentación es parte del módulo de entrada de energía, a la derecha del conector del dable de alimentación.

Inserte un desarmador pequeño dentro del área del conector de cable de alimentación, alcanzando dentro de la ranura del módulo de portador de fusible de la fuente de alimentación. Separe el módulo levemente, hasta que pueda sujetarlo firmemente con sus dedos. Tire del módulo de portador de fusibles hacia fuera del módulo de entrada de energía. Los dos fusibles de fuente de alimentación están montados holgadamente dentro del módulo de portador de fusible, tenga cuidado de que no se caigan.

Reemplace los fusibles si es necesario, usando los fusibles como se describe a continuación. Reinserte cuidadosamente el módulo portador de fusibles dentro del módulo de entrada de energía, y presione firmemente en su lugar.

Conecte el cable de alimentación desde una salida de fuente de alimentación hacia el conector de cable de alimentación en el panel posterior del instrumento.

Abbreviations, Terms and Symbols

used in the following specifications

ADC or A/D . . . . . Analog to Digital converter or conversion.

BW . . . . . Bandwidth or Measurement Bandwidth, nominally at –3 dB; a single number indicates only the upper limit.

DAC or D/A . . . . . Digital to Analog converter or conversion.

DSP . . . . . Digital Signal Processing or Digital Signal Processor.

DUT . . . . . Device Under Test, the device to which the generator or analyzer is connected.

EMC . . . . . Electro-Magnetic Compatibility, usually refers to both emissions (radiated and conducted via AC mains) and susceptibility.

ENBW . . . . . Equivalent Noise Bandwidth, the frequency of an ideal filter having the same rms response to white noise.

FFT . . . . . Fast Fourier Transform, a mathematical process converting a signal in the time domain to the frequency domain.

IMD . . . . . Inter-Modulation Distortion, a measure of non-linearity using a test signal with two or more components.

RMS or rms . . . . . Root Mean Square, an equivalent-power expression of signal amplitude.

SR . . . . . Sample Rate, usually as it applies to the conversion rate of A/D and D/A converters or digital audio formats.

THD . . . . . Total Harmonic Distortion, rms summation of d2 to d9 (may be bandwidth limited), usually derived from an FFT.

THD+N . . . . . Rms measurement of ALL harmonics, spurious signals, and noise within a specified bandwidth.

Typical or Typ . . . . . A characteristic that is not guaranteed, usually due to a practical limitation in testing or metrology.

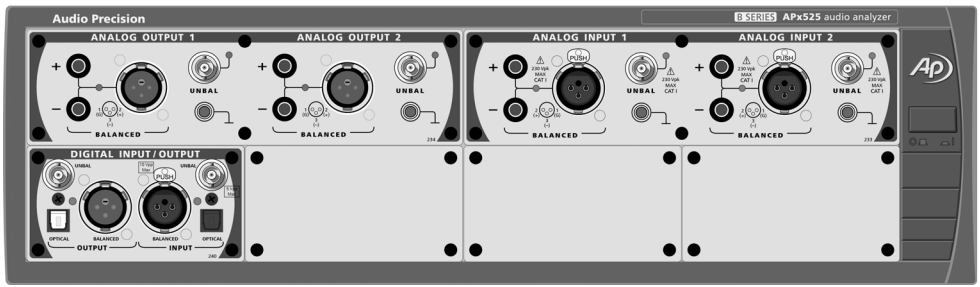
UI . . . . . Unit Interval, a measure of time is it applies to digital audio formats.
1 UI= 1/(128 • SR)

[ ] . . . . . Indicates a specification in an equivalent unit, for example: 0.030 dB [0.35%] or 10.61 Vrms [30.00 Vpp].

≈ . . . . . Indicates an approximate or nominal value, or range of values; not guaranteed.

Analog I/O specifications
APx525/526 B Series family of audio analyzers

with APx500 v5.0 or higher measurement software
December 2018 NP0020.00032 r000



This illustration shows an APx525 B Series in its standard configuration, with a DIO module installed.

These specifications cover the analog input and output functions of the Audio Precision APx525 and APx526 B Series analyzers.

The APx525 has 2 analog output channels and 2 analog input channels.
The APx526 has 2 analog output channels and 4 analog input channels.

The performance of AG52 analog generator option and the BW52 analog analyzer option are also specified in this section.

Specifications for the DIO interface and other available interface modules including ADIO, DSIO, HDMI, PDM, AMC and Bluetooth, are found in other sections of this document, as are General and Environmental specifications for the entire APx 52x/58x B Series family.

Analog specifications begin on the next page.

Normal Mode Rejection		*Typically > 90 dB, 20 Hz to 20 kHz.*

NOTES to SPECIFICATIONS:

1	System specification including contributions from both generator and analyzer. Generator-only and/or analyzer-only contributions are typically less.
2	Generator load must be ≥600Ω balanced or ≥300Ω unbalanced for specified performance. Generator dc offset must be off or set to ≤10 mV.
3	Input must be ≥150 mV for specified performance. Analyzer must be set to measure “d2+d3” for MOD and DFD, and “U1…U9” for DIM per IEC-60268.
4	Valid for the balanced input configuration with DC coupling only. With AC coupling, specified performance is invalid below 50 Hz.
5	Maximum low-pass filter frequency is limited by analyzer input bandwidth setting.
6	Filter response is relative to “no filter” selection; overall system performance will also include analog flatness imperfections. DSP warping may significantly increase roll-off rate and lower ENBW.

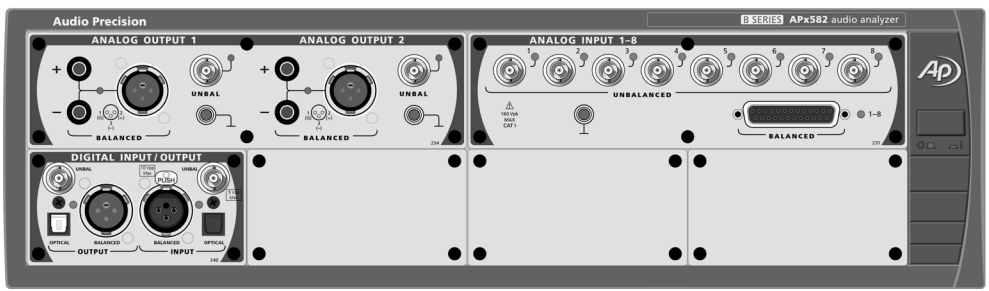
APx582 B Series audio analyzer

with APx500 v5.0 or higher measurement software
December 2018 NP0020.00039 r000



This illustration shows an APx582 B Series in its standard configuration, with a DIO module installed.

These specifications cover the analog input and output functions of the Audio Precision B Series APx582 audio analyzer. The APx582 has 2 analog output channels and 8 analog input channels. The APx582 is fitted with the AG52 analog generator option as a standard feature. The performance of the AG52 when fitted in an APx582 is also specified in this section.

Specifications for the DIO interface and other available interface modules including DSIO, HDMI, PDM and Bluetooth, are found in other sections of this document, as are General and Environmental specifications for the entire APx B Series family.

Normal Mode Rejection		*Typically > 90 dB, 20 Hz to 20 kHz.*

NOTES to SPECIFICATIONS:

1	System specification including contributions from both generator and analyzer. Generator-only and/or analyzer-only contributions are typically less.
2	Generator load must be ≥600Ω balanced or ≥300Ω unbalanced for specified performance. Generator dc offset must be off or set to ≤10 mV.
3	Input must be ≥150 mV for specified performance. Analyzer must be set to measure “d2+d3” for MOD and DFD, and “U1…U9” for DIM per IEC-60268.
4	Valid for the balanced input configuration with DC coupling only. With AC coupling, specified performance is invalid below 50 Hz.
5	Maximum low-pass filter frequency is limited by analyzer input bandwidth setting.
6	Filter response is relative to “no filter” selection; overall system performance will also include analog flatness imperfections. DSP warping may significantly increase roll-off rate and lower ENBW.

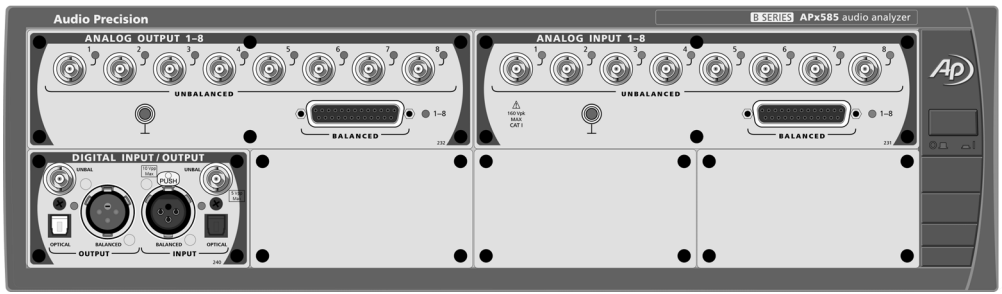
December 2018 NP0020.00031 r000



This illustration shows an APx585 B Series in its standard configuration, with a DIO module installed.

These specifications cover the analog input and output functions of the Audio Precision B Series APx585 and APx586 audio analyzers. The APx585 has 8 analog output channels and 8 analog input channels; the APx586 has 8 analog output channels and 16 analog input channels.

Specifications for the DIO interface and other available interface modules including DSIO, HDMI, PDM and Bluetooth, are found in other sections of this document, as are General and Environmental specifications for the entire APx B Series family.

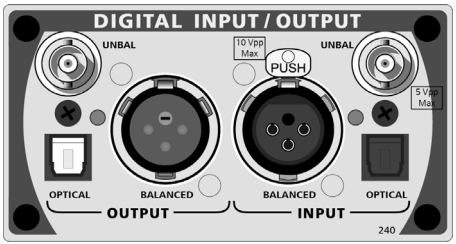
DIO digital input/output module specifications

with APx500 v5.0 or higher measurement software
as fitted in APx52x and 58x B Series audio analyzers
NP0020.00037 rev 000
December, 2018



This illustration shows an APx DIO module, model 240.

These specifications cover the digital input and output functions of the Audio Precision DIO. The DIO is available as a stand-alone module (models 240).

The APx DIO provides balanced digital input and output compatible with AES3, AES/EBU and IEC60958-4, on XLR connectors; unbalanced digital input and output compatible with S/PDIF and IEC60958-3 and also AES3id and SMPTE 276 M, on BNC connectors; and optical digital input and output compatible with Toslink interfaces.

Accuracy		*Typically < 0.001 deg*

NOTES to SPECIFICATIONS:

1. Sample rate (SR) must be ≥27 kS/s for specified performance. Jitter analyzer set for 700 Hz high-pass response per AES3-1992.
2. Digital generator word width must be set to 24 bits for specified performance; shorter word widths may degrade performance.
3. Maximum low-pass filter frequency is limited by input sample rate (SR).
4. DSP warping may significantly increase roll-off rate and lower ENBW.

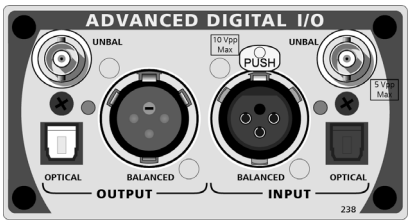
as fitted in APx52x, 555, and 58x B Series audio analyzers
NP0020.00041 rev 000
December, 2018



This illustration shows an APx ADIO module, model 238.

These specifications cover the digital input and output functions of the Audio Precision Advanced Digital Input/Output (ADIO). The ADIO is available as a stand-alone module (model 238).

The APx ADIO provides balanced digital input and output compatible with AES3, AES/EBU and IEC60958-4, on XLR connectors; unbalanced digital input and output compatible with S/PDIF and IEC60958-3 and also AES3id and SMPTE 276 M, on BNC connectors; and optical digital input and output compatible with Toslink interfaces.

ADIO also enables certain carrier and metadata impairments, and it supports the imposition of jitter on the transmitted carrier, and jitter measurement, when used with the Advanced Master Clock (AMC).

ADIO specifications begin on the next page.

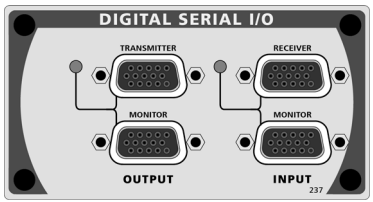
DSIO digital serial input/output module specifications

with APx500 v5.0 or higher measurement software
as fitted in APx52x, 555, and 58x B Series audio analyzers
NP0020.00034 rev 000
December, 2018



This illustration shows an APx DSIO module, model 237.

These specifications cover the digital serial input and output functions of the Audio Precision DSIO. The DSIO is available as a stand-alone module (model 237).

The Digital Serial Input/Output (or DSIO) option provides a flexible chip- or board-level serial input and output interface. With separate Master Clock, Bit Clock, Frame Clock, Channel Clock and four Data lines, variable signal formats, variable word width, bit depth and synchronization options, the DSIO can address almost any serial interface need.

Formats include TDM, I^2S, DSP (bit-wide pulse) and custom formats. Up to 16 channels can be transmitted and received using the TDM format.

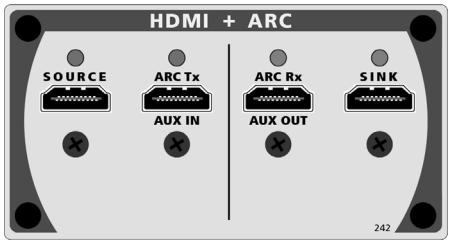
NOTES to SPECIFICATIONS		
	1	System specification including contributions from both generator and analyzer subject to the following condition: Bit Clock ≥ 192 kHz.
	2	In TDM, channel count can limit the bit clock rate.
	3	For Digital Serial (DSIO), the Unit Interval (UI) is defined as 1/fb, where fb is the bitclock rate in hertz.

HDMI+ARC input/output module specifications

with APx500 v5.0 or higher measurement software
as fitted in APx52x, 555 and 58x B Series audio analyzers
NP0020.00033 rev 000
December, 2018



This illustration shows the HDMI+ARC module, model 242.

These specifications cover the input and output functions of the Audio Precision HDMI+ARC (High Definition Multimedia Interface plus Audio Return Channel) I/O module. HDMI+ARC is available as a stand-alone module, model 242.

The model HDMI+ARC module is fully compatible with HDMI 1.3a; additionally, it supports a subset of HDMI 1.4a, the ARC (Audio Return Channel) feature. HDMI EDID 1.4 is supported, and CEC communications on the Source and Sink connectors is supported. Go to Help > About in APx500 to check feature availability.

HDMI is designed to carry high-bandwidth digital streams providing an audio/video interface that includes content protection and a bi-directional channel for interaction with connected electronic devices. ARC (Audio Return Channel) provides an additional digital audio channel, which can simplify interface cabling in certain applications, for user convenience.

HDMI+ARC specifications begin on the next page.

Characteristic	Specifications	Supplemental Information
Revision	1.3a + ARC.	*ARC (Audio Return Channel) implemented per HDMI 1.4a*
Device Connections		
SOURCE	Typically connects to the sink input of a DUT.	*The video is an internally generated single color screen or the signal applied to the AUX IN connector. The audio is internally generated: see "Embedded Output Signal Related" under "DIGITAL I/O" for typical waveforms and parameters.*
ARC Tx / AUX IN	HDMI ARC Tx configuration: Typically connects to an HDMI source that accepts ARC audio. HDMI Source configuration: typically connects to an external source of video to be included in the Source output signal.	*Generates and transmits audio across ARC, per HDMI 1.4a. HDMI source should not transmit video.* *Incoming audio is ignored. Incoming video is passed to HDMI Source in "pass through" mode.*
ARC Rx / AUX OUT	HDMI ARC Rx configuration: Typically connects to an HDMI sink that produces ARC audio. HDMI Sink configuration: Typically connects to an independent monitoring device.	*HDMI ARC Rx configuration: Receives and analyzes audio across ARC, per HDMI 1.4a. No video is transmitted.* *HDMI Sink configuration: Contains video and audio sent to Sink input.*
SINK	Typically connects to the source output of a DUT.	*The embedded and encoded audio signal components are recovered for analysis.*
Hardware Interface	HDMI Type A	
EDID	256-byte EEPROM on both Sink and ARC TX / AUX IN connectors.

Notes to Specifications

1. System specification including contributions from both generator and analyzer. Generator-only and analyzer-only contributions are typically less.
2. Sample rate (SR) must be ≥ 27 kHz for specified performance. Jitter analyzer set for 700 Hz highpass response per AES3-1992.
3. Digital generator word width must be set to 24 bits for specified performance; shorter word widths may degrade performance.
4. DSP warping may significantly increase roll-off rate and lower ENBW.

This illustration shows the Bluetooth Duo module, model 241.

These specifications cover the digital input and output functions of the Audio Precision Bluetooth Duo interface.

Bluetooth™ is a short-distance (a few meters) control, data, and audio communications wireless technology. Bluetooth uses low power, frequency-hopping radio in the 2.4 GHz band. Communication is two-way (for handshaking, metadata, etc); some profiles (HFP, for example) support duplex audio (both directions simultaneously); some profiles (A2DP) support only simplex audio (one direction per connection). Audio Precision supports several audio-specific Bluetooth profiles for audio test.

PDM input/output module specifications

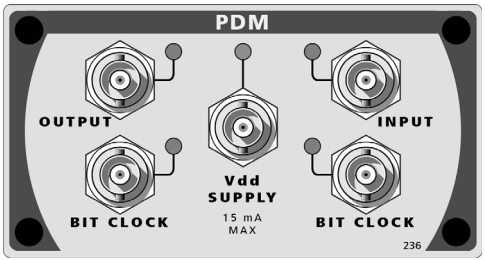
NP0020.00036 rev 000
December 2018



This illustration shows the PDM module, model 236.

The PDM option provides a complete solution for addressing circuits or devices with a PDM input or output. The PDM signal output consists of an APx generator audio signal, interpolated by a broad choice of oversampling ratios, and modulated into a 1-bit PDM bitstream. A 4th-order modulator is the default; a 5th-order modulator can be selected. The PDM Option also provides a signal input with its associated clock connection. The input accepts a 1-bit PDM bit-stream, which is then decimated by one of a wide range of decimation ratios and filtered into baseband audio at the Decimated Rate. The input bitstream can also be analyzed directly (before decimation) in the Signal Analyzer to view out-of-band components.

These specifications cover the digital input and output functions of the Audio Precision PDM interface for the current version, model 236.
